— and HUBBARD, RUTH. The reduction of retinene$_1$ to vitamin A$_1$ *in vitro*, 367

WESSON, LAURENCE G., JR., COHN, WALDO E., and BRUES, AUSTIN M. The effect of temperature on potassium equilibria in chick embryo muscle, 511

WOLKEN, J. J., and SCHWERTZ, F. A. Physical structure of shell membranes, 153

ZEUTHEN, ERIK. See GIESE and ZEUTHEN, 525

INDEX TO SUBJECTS

ALCOHOL, *n*-butyl, resorcinol, and similar lysins, permeability of human red cells to cations after treatment with, 53

—, ethyl, dilute solution, crystallization of salt-free chymotrypsinogen and chymotrypsin from, 265

Aldehydes, aliphatic, and ketones, stimulation of blowfly tarsal receptors by, 445

Aliphatic aldehydes and ketones, stimulation of blowfly tarsal receptors by, 445

Antibody, pneumococcus, crystalline, 705

Aquarium goldfish toxicities of phenols, quinones, and other benzene derivatives, correlation with their inhibition of autooxidative reactions, 671

Aqueous humor/plasma chloride ratios in rabbits, dogs, and human beings, 329

Assimilation, nitrogen, in yeast, tracer studies, 271

— and reduction, nitrate, in *Chlorella*, 93

Autooxidative reactions, correlation of aquarium goldfish toxicities of phenols, quinones, and other benzene derivatives with their inhibition of, 671

BACTERIA rendered non-viable by mustard gas, formation of bacterial viruses in, 63

—, stenothermophilic, respiratory enzymes, temperature activation, 313

Bacterial cell, bacteriophage released from, in *Staphylococcus muscae* cultures, 203

— viruses, formation in bacteria rendered non-viable by mustard gas, 63

— viruses, stability in solutions of salts, 579

Bacteriophage formation by staphylococci at elevated temperatures, effect of sodium chloride, 279

— formation in *Staphylococcus muscae* cultures, effect of yeast fraction on virus synthesis, 301

— formation in *Staphylococcus muscae* cultures, relationship between virus release and cellular lysis, 481

— and host competing for nutrient in *Staphylococcus muscae* cultures, 213

—released from cell in *Staphylococcus muscae* cultures, 203

Benzene derivatives, phenols, and quinones, aquarium goldfish toxicities, correlation with their inhibition of autooxidative reactions, 671

Blepharisma, pigmented, photooxidations in, 525

Blood coagulation, chemical state of calcium reacting in, 191

— corpuscles, red. *See* Erythrocytes.

Blowflies, tarsal receptors, stimulating effect of glycols and their polymers on, 139

Blowfly, tarsal receptors, stimulation by aliphatic aldehydes and ketones, 445

Butyl alcohol, *n*-, similar lysins, and resorcinol, permeability of human red cells to cations after treatment with, 53

CALCIUM reacting in blood coagulation, chemical state, 191

Cations, monovalent, tonicity-volume relations for systems containing human red cells and chlorides of, 391

—, permeability of human red cells to, after treatment with resorcinol, *n*-butyl alcohol, and similar lysins, 53

Cell activation, change in osmotically inactive fraction produced by, 43
—, bacterial, bacteriophage released from, in *Staphylococcus muscae* cultures, 203
— membranes, rôle in cellular respiration, 163
Cell-free oxidative system from sea urchin eggs, oxygen consumption, dinitrocresol and phosphate stimulation, 503
Cells, blood, red. *See* Erythrocytes.
—, *Nitella*, movements of water in, 553
—, *Nitella*, transport of water from concentrated to dilute solutions in, 559
— and viruses inactivated by mustard gas, 221
Cellular lysis and virus release, relation in bacteriophage formation in *Staphylococcus muscae* cultures, 481
— respiration, rôle of cell membranes in, uranium inhibition of, 163
— respiration, rôle of soluble sulfhydryl groups shown by effect of sulfhydryl reagents on sea urchin sperm respiration, 179
Chaetomium globosum spores, mutants produced by x-irradiation, comparison with those produced by ultraviolet irradiation, 647
Chemical state of calcium reacting in blood coagulation, 191
Chlorella, metabolic conditions, 103
—, nitrate reduction and assimilation in, 93
Chloride, ratios in plasma and aqueous humor in rabbits, dogs, and human beings, 329
Chlorides of monovalent cations, and human red cells, tonicity-volume relations for systems containing, 391
Chromosomes, state in interphase nucleus, 489
Chymotrypsin and chymotrypsinogen, salt-free, crystallization from solution in dilute ethyl alcohol, 265
Chymotrypsinogen and chymotrypsin, salt-free, crystallization from solution in dilute ethyl alcohol, 265
Coagulation, blood, chemical state of calcium reacting in, 191
Contractility of nerve and muscle and the potentiometric reaction, influence of detergents, 111
Corpuscles, blood, red. *See* Erythrocytes.
Crystalline pneumococcus antibody, 705
— ribonuclease, protease-free, preparation, method, 39
— ribonuclease, proteolytic contaminants, 33
— ricin, isolation, 25
— soy bean trypsin inhibitor, kinetics and thermodynamics of reversible denaturation of, 241
Crystallization of salt-free chymotrypsinogen and chymotrypsin from solution in dilute ethyl alcohol, 265
Cultivation of *Staphylococcus muscae*, bacteriophage formation, effect of yeast fraction on virus synthesis, 301
— of *Staphylococcus muscae*, bacteriophage and host competing for nutrient, 213
— of *Staphylococcus muscae* bacteriophage, relation between virus release and cellular lysis, 481
—of *Staphylococcus muscae*, bacteriophage released from cell, 203
Cyanide inhibition of respiration of tissues of invertebrates, 655

DETERGENTS, influence upon potentiometric reaction and contractility of nerve and muscle, 111
Dinitrocresol and phosphate stimulation of oxygen consumption of cell-free oxidative system from sea urchin eggs, 503

Drosophila melanogaster, larval salivary gland, peptidase increase accompanying growth, 623
—*melanogaster*, salivary glands, extracts, peptidase activities, 607

EGG, *Nereis limbata*, relations of plasma membrane, vitelline membrane, and jelly in, 351
Eggs, sea urchin, cell-free oxidative system from, oxygen consumption, dinitrocresol and phosphate stimulation, 503
Electric properties of synthetic membranes, 453
Electrode, platinum, static, with alternating potential, oxygen tension measurement by time selection method using, 681
Electrolytes, non-polar–polar organic, physiological effects, influence of detergents upon potentiometric reaction and contractility of nerve and muscle, 111
Embryo muscle, chick, potassium equilibria, temperature effect, 511
Enzyme preparations, proteolytic activities, determination, rapid method, 17
Enzymes, inhibition by x-rays, 537
—, respiratory, of stenothermophilic bacteria, temperature activation, 313
—, sulfhydryl, inhibition by alpha, beta, and gamma rays, 595
Erythrocytes, human, and chlorides of monovalent cations, tonicity-volume relations for systems containing, 391
—, human, permeability to cations after treatment with resorcinol, *n*-butyl alcohol, and similar lysins, 53
—, human, subjected to heat action, tonicity-volume relations with special reference to prolytic potassium loss, 399
—, rate of potassium loss in systems without added lysins, 461
Ethyl alcohol, dilute solution, crystallization of salt-free chymotrypsinogen and chymotrypsin from, 265
Excitation of nerve, activation of passive iron as model for, 69
Extracts, salivary glands, *Drosophila melanogaster*, peptidase activities, 607

FERTILIZED rabbit ova, effects of heterologous sera, 291
Fowl embryo muscle, potassium equilibria, temperature effect, 511

GAS, mustard, and formation of bacterial viruses in bacteria rendered non-viable by, 63
—, mustard, viruses and cells inactivated by, 221
Gland, salivary, larval, of *Drosophila melanogaster*, peptidase increase accompanying growth, 623
—, salivary, of *Drosophila melanogaster*, extracts, peptidase activities, 607
Glycols and their polymers, stimulating effect on tarsal receptors of blowflies, 139
Goldfish, aquarium, correlation of toxicities of phenols, quinones, and other benzene derivatives with their inhibition of autooxidative reactions, 671
Growth of *Drosophila melanogaster* larval salivary gland, peptidase increase accompanying, 623

HEAT action, tonicity-volume relations for human red cells subjected to, with special reference to prolytic potassium loss, 399
Hecht, Selig, 1
Heterologous sera, effects on fertilized rabbit ova, 291
Humor, aqueous/plasma chloride ratios in rabbits, dogs, and human beings, 329

INVERTEBRATES, tissues, respiration, cyanide inhibition, 655

Ionizing radiations, mechanism of action, inhibition of enzymes by x-rays, 537
— radiations, mechanism of action, inhibition of sulfhydryl enzymes by alpha, beta, and gamma rays, 595
Iron, passive, activation as model for excitation of nerve, 69
Irradiation, x- and ultraviolet, of *Chaetomium globosum* spores, comparison of mutants produced by, 647

JELLY, plasma membrane, and vitelline membrane in *Nereis limbata* egg, 351

KETONES and aliphatic aldehydes, stimulation of blowfly tarsal receptors by, 445
Kinetics and thermodynamics of reversible denaturation of crystalline soy bean trypsin inhibitor, 241

LARVAL salivary gland of *Drosophila melanogaster*, peptidase increase accompanying growth, 623
Lysins, permeability of human red cells to cations after treatment with resorcinol, *n*-butyl alcohol, and, 53
—, rate of potassium loss from human red cells in systems without added, 461
Lysis, cellular, and virus release, relation in bacteriophage formation in *Staphylococcus muscae* cultures, 481

MAN, rabbits, and dogs, aqueous humor/plasma chloride ratios in, 329
—, red cells, and chlorides of monovalent cations, tonicity-volume relations for systems containing, 391
—, red cells in systems without added lysins, rate of potassium loss, 461
Man, red cells, permeability to cations after treatment with resorcinol, *n*-butyl alcohol, and similar lysins, 53
—, red cells subjected to heat action, tonicity-volume relations, with special reference to prolytic potassium loss, 399
Membrane, plasma and vitelline, and jelly, relations in *Nereis limbata* egg, 351
Membranes, cell, rôle in cellular respiration, 163
—, shell, physical structure, 153
—, synthetic, electrical properties, 453
Metabolic conditions in *Chlorella*, 103
Muscle, chick embryo, potassium equilibria, temperature effect, 511
— and nerve, contractility, and potentiometric reaction, influence of detergents, 111
Mustard gas and formation of bacterial viruses in bacteria rendered nonviable by, 63
— gas, viruses and cells inactivated by, 221
Mutants produced by x-irradiation of *Chaetomium globosum* spores, comparison with those produced by ultraviolet irradiation, 647

NEREIS *limbata* egg, relations of plasma membrane, vitelline membrane, and jelly in, 351
Nerve, excitation, activation of passive iron as model for, 69
— and muscle, contractility, and potentiometric reaction, influence of detergents, 111
Nitella cells, movements of water in, 553
— cells, transport of water from concentrated to dilute solutions in, 559
Nitrate reduction and assimilation in *Chlorella*, 93
Nitrogen assimilation in yeast, tracer studies, 271

Nucleus, interphase, state of chromosomes in, 489
Nutrient, host and virus competing for, in bacteriophage formation in *Staphylococcus muscae* cultures, 213

ORGANIC electrolytes, non-polar–polar, physiological effects, influence of detergents upon potentiometric reaction and contractility of nerve and muscle, 111
Osmotically inactive fraction produced by cell activation, change in, 43
Ova, rabbit, fertilized, effects of heterologous sera, 291
Oxidative, auto-, reactions, correlation of aquarium goldfish toxicities of phenols, quinones, and other benzene derivatives with their inhibition of, 671
— system, cell-free, from sea urchin eggs, oxygen consumption, dinitrocresol and phosphate stimulation, 503
Oxygen consumption of cell-free oxidative system from sea urchin eggs, dinitrocresol and phosphate stimulation, 503
— tension measurement by time selection method using static platinum electrode with alternating potential, 681

PEPTIDASE activities of salivary gland extracts of *Drosophila melanogaster*, 607
— increase accompanying growth of *Drosophila melanogaster* larval salivary gland, 623
Permeability of human red cells to cations after treatment with resorcinol, *n*-butyl alcohol, and similar lysins, 53
Phage. *See* Bacteriophage.
Phenols, quinones, and other benzene derivatives, aquarium goldfish toxicities, correlation with their inhibition of autooxidative reactions, 671
Phosphate and dinitrocresol stimulation of oxygen consumption of cell-free oxidative system from sea urchin eggs, 503
Photometric analysis and photomicrography, simplified apparatus for, 567
Photomicrography and photometric analysis, simplified apparatus for, 567
Photooxidations in pigmented *Blepharisma*, 525
Physical structure of shell membranes, 153
Physiological effects of non-polar–polar organic electrolytes, influence of detergents upon potentiometric reaction and contractility of nerve and muscle, 111
Pigmented *Blepharisma*, photooxidations in, 525
Plasma chloride/aqueous humor ratios in rabbits, dogs, and human beings, 329
— membrane, vitelline membrane, and jelly, relations in *Nereis limbata* egg, 351
Platinum electrode, static, with alternating potential, oxygen tension measurement by time selection method using, 681
Pneumococcus antibody, crystalline, 705
Polymers of glycols, stimulating effect on tarsal receptors of blowflies, 139
Potassium equilibria in chick embryo muscle, temperature effect, 511
— loss, prolytic, tonicity-volume relations for human red cells subjected to heat action with special reference to, 399
—, rate of loss from human red cells in systems without added lysins, 461
Potential, alternating, oxygen tension measurement by time selection method using static platinum electrode with, 681

Potentials, dorsal root, origins, 409
Potentiometric reaction and contractility of nerve and muscle, influence of detergents, 111
Protease-free crystalline ribonuclease, preparation, method, 39
Proteolytic activities of enzyme preparations, determination, rapid method, 17
— contaminants of crystalline ribonuclease, 33

QUINONES, phenols, and other benzene derivatives, aquarium goldfish toxicities, correlation with their inhibition of autooxidative reactions, 671

RADIATIONS, ionizing, mechanism of action, inhibition of enzymes by x-rays, 537
—, ionizing, mechanism of action, inhibition of sulfhydryl enzymes by alpha, beta, and gamma rays, 595
Reagents, sulfhydryl, effect on sea urchin sperm respiration, 179
Reduction and assimilation, nitrate, in *Chlorella*, 93
— of retinene$_1$ to vitamin A$_1$ *in vitro*, 367
Resorcinol, *n*-butyl alcohol, and similar lysins, permeability of human red cells to cations after treatment with, 53
Respiration, cellular, rôle of cell membranes in, uranium inhibition of, 163
—, cellular, rôle of soluble sulfhydryl groups shown by effect of sulfhydryl reagents on sea urchin sperm respiration, 179
— of tissues of invertebrates and inhibition by cyanide, 655
Respiratory enzymes of stenothermophilic bacteria, temperature activation, 313
Retinene$_1$, reduction to vitamin A$_1$ *in vitro*, 367
Ribonuclease, crystalline, proteolytic contaminants, 33
—, protease-free crystalline, preparation, method, 39
Ricin, crystalline, isolation, 25
Roentgen rays, inhibition of enzymes by, 537
— rays and ultraviolet rays, irradiation of *Chaetomium globosum* spores, comparison of mutants produced by, 647
Root potentials, dorsal, origins, 409

SALIVARY gland, larval, *Drosophila melanogaster*, peptidase increase accompanying growth, 623
— glands of *Drosophila melanogaster*, extracts, peptidase activities, 607
Salt-free chymotrypsinogen and chymotrypsin, crystallization from solution in dilute ethyl alcohol, 265
Salts, solutions, stability of bacterial viruses in, 579
Sea urchin eggs, cell-free oxidative system from, oxygen consumption, dinitrocresol and phosphate stimulation, 503
— urchin sperm, respiration, effect of sulfhydryl reagents, 179
Sera, heterologous, effects on fertilized rabbit ova, 291
Shell membranes, physical structure, 153
Sodium chloride, effect on bacteriophage formation by staphylococci at elevated temperatures, 279
Solutions, dilute, in *Nitella* cells, transport of water from concentrated to, 559
— of salts, stability of bacterial viruses in, 579
Soy bean trypsin inhibitor, crystalline, kinetics and thermodynamics of reversible denaturation of, 241
Sperm, sea urchin, respiration, effect of sulfhydryl reagents, 179
Spermatozoa, rabbit, motility in dilute suspension, 121

Spores, *Chaetomium globosum*, mutants produced by x-irradiation, comparison with those produced by ultraviolet irradiation, 647
Staphylococci, bacteriophage formation by at elevated temperatures, effect of sodium chloride, 279
Staphylococcus muscae cultures, bacteriophage formation, effect of yeast fraction on virus synthesis, 301
— *muscae* cultures, bacteriophage formation, relationship between virus release and cellular lysis, 481
— *muscae* cultures, bacteriophage and host competing for nutrient, 213
— *muscae* cultures, bacteriophage released from cell, 203
Stenothermophilic bacteria, respiratory enzymes, temperature activation, 313
Sulfhydryl enzymes, inhibition by alpha, beta, and gamma rays, 595
— groups, soluble, rôle in cellular respiration shown by effect of sulfhydryl reagents on sea urchin sperm respiration, 179

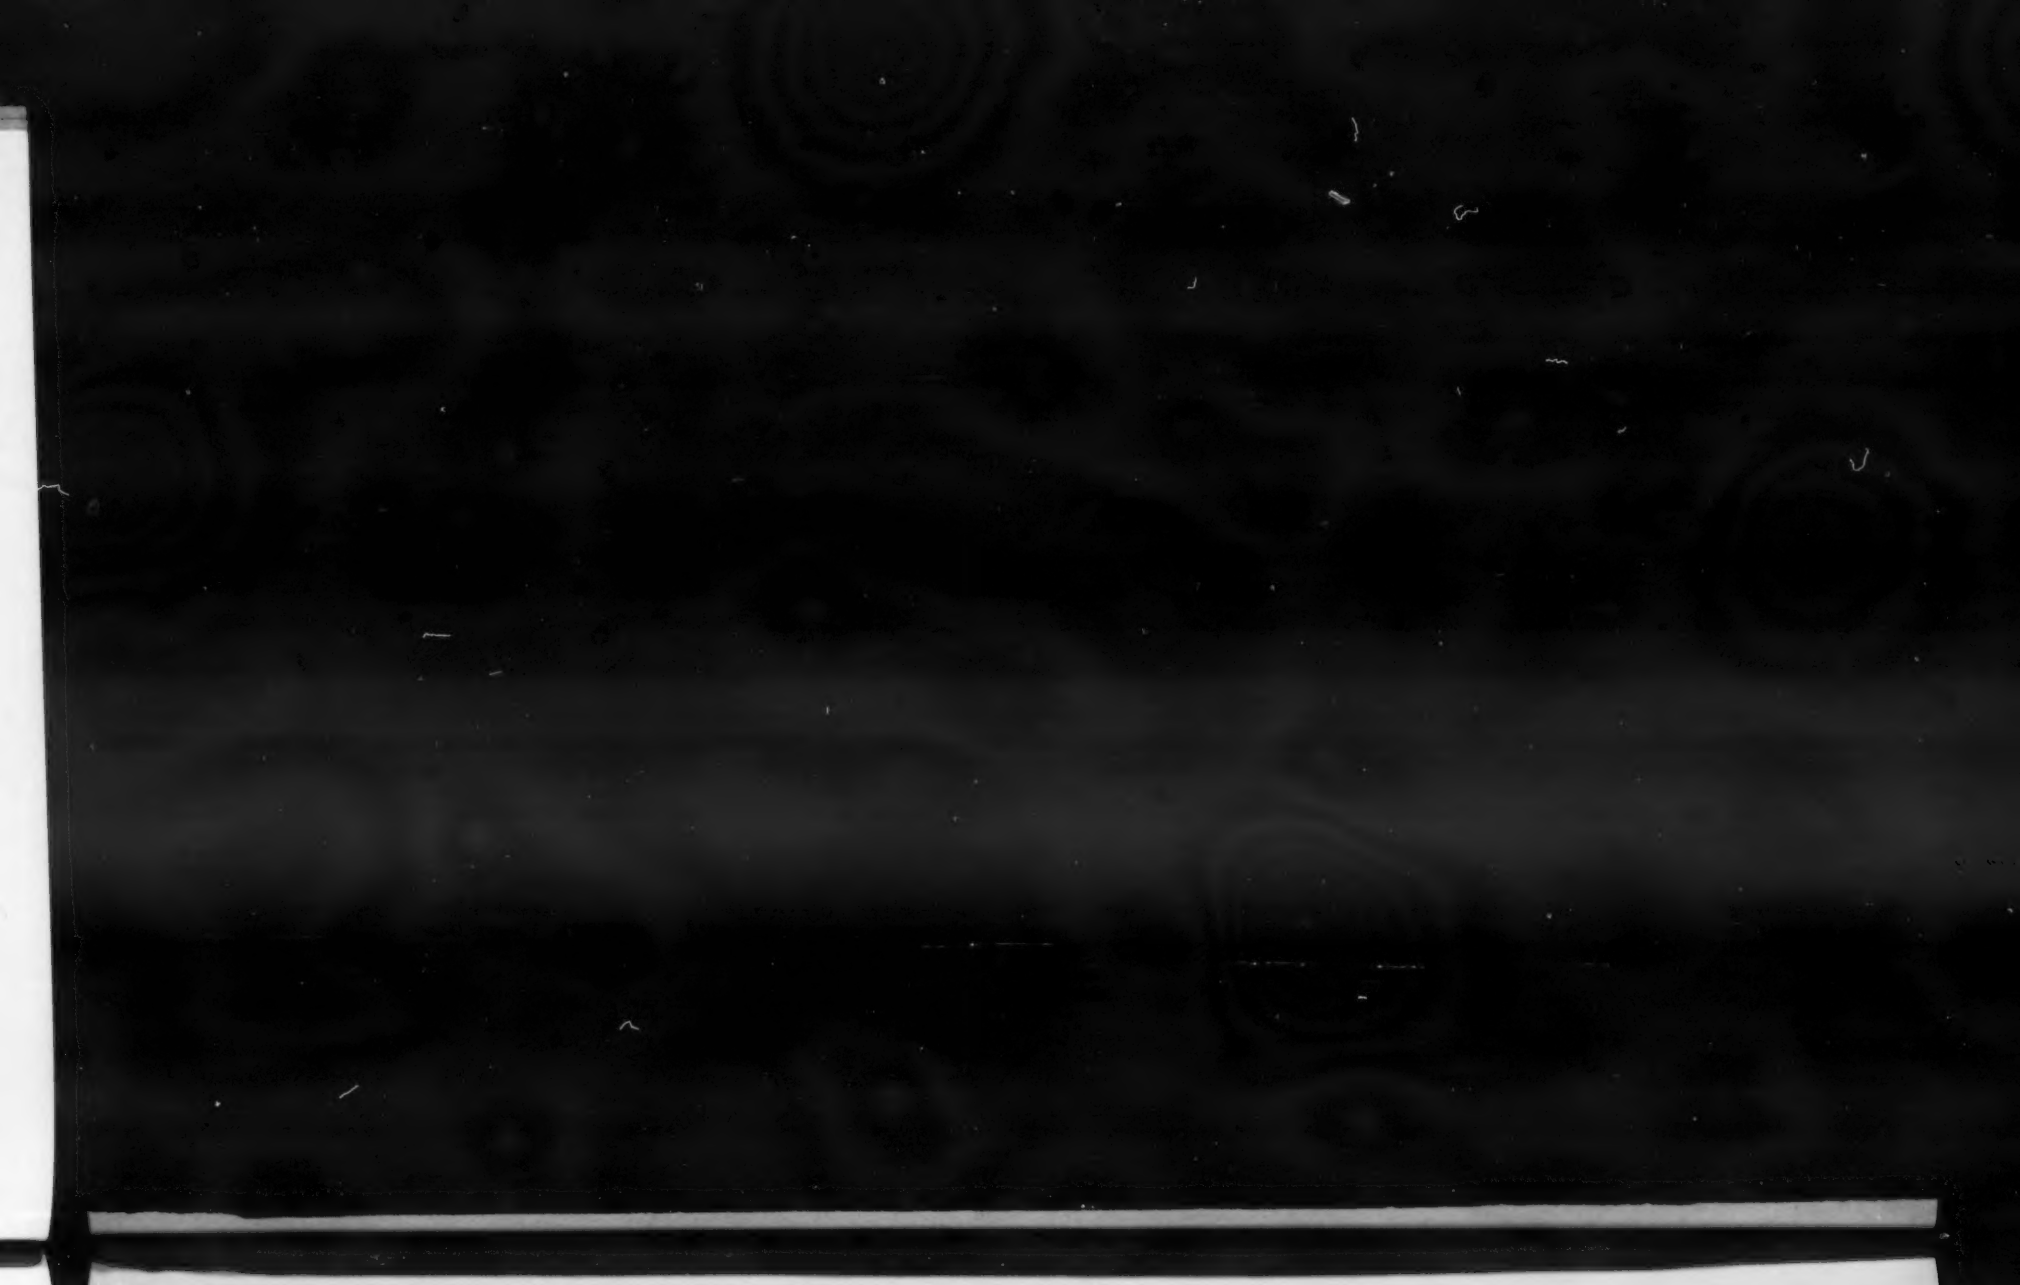
TEMPERATURE activation of respiratory enzymes of stenothermophilic bacteria, 313
—, effect on potassium equilibria in chick embryo muscle, 511
Temperatures, elevated, effect of sodium chloride on bacteriophage formation by staphylococci at, 279
Tension measurement, oxygen, by time selection method, using static platinum electrode with alternating potential, 681
Thermodynamics and kinetics of reversible denaturation of crystalline soy bean trypsin inhibitor, 241
Time selection method using static platinum electrode with alternating potential, oxygen tension measurement by, 681
Tissues, invertebrates, respiration, cyanide inhibition, 655
Tonicity-volume relations for human red cells subjected to action of heat, with special reference to prolytic potassium loss, 399
— relations for systems containing human red cells and chlorides of monovalent cations, 391
Toxicities, aquarium goldfish, of some phenols, quinones, and other benzene derivatives, correlation with their inhibition of autooxidative reactions, 671
Trypsin, chymo-, and chymotrypsinogen, salt-free, crystallization from solution in dilute ethyl alcohol, 265
— inhibitor, crystalline soy bean, kinetics and thermodynamics of reversible denaturation of, 241
Trypsinogen, chymo-, and chymotrypsin, salt-free, crystallization from solution in dilute ethyl alcohol, 265

ULTRAVIOLET irradiation, mutants produced by x-irradiation of *Chaetomium globosum* spores, comparison with those produced by, 647
Uranium inhibition of cellular respiration, 163
Urease activation, 339

VIRUS, competition with host for nutrient in bacteriophage formation in *Staphylococcus muscae* cultures, 213
— release and cellular lysis, relation in bacteriophage formation in *Staphylococcus muscae* cultures, 481
— released from bacterial cell in bacteriophage formation in *Staphylococcus muscae* cultures, 203
— synthesis, effect of yeast fraction on, in bacteriophage formation in

Staphylococcus muscae cultures, 301
Viruses, bacterial, formation in bacteria rendered non-viable by mustard gas, 63
—, bacterial, stability in solutions of salts, 579
— and cells inactivated by mustard gas, 221
Vitamin A_1, reduction of retinene$_1$ *in vitro* to, 367
Vitelline membrane, plasma membrane, and jelly, relations in *Nereis limbata* egg, 351

WATER, movements in *Nitella* cells, 553
— transport from concentrated to dilute solutions in *Nitella* cells, 559

X-RAYS. *See* Roentgen rays.


YEAST fraction, effect on virus synthesis in bacteriophage formation in *Staphylococcus muscae* cultures, 301
—, tracer studies of nitrogen assimilation in, 271
